

Tutorial NLP 2

1. Import spaCy and displaCy. Parse an arbitrary string. Use displaCy to visualize the dependency parse. Save the image obtained on your computer as a svg file.
2. Import spaCy and displaCy. Choose two different strings and parse them.
Show the tokens in each string.
Show texts in each string.
Merge the two strings.
Show the sentences in the new merged strings.
Print tokens and lemma of the merged strings.
Test the span function.
Print the tokens for each span.
3. Consider the following text : “Jean-Claude, can you help please ?, ... , I will give it you back ! Never forget ... Thank you”.
 - a. Parse the text. Print the sentences, the tokens and lemma in this string.
 - b. Create a new custom delimiter using ‘...’ as delimiters.
 - c. Detect the sentences with and without customization.
4. Read about “Beautifulsoup” (bs4) and import it to your environment.
Consider the guardian text here : <https://www.theguardian.com/us-news/2022/jun/18/donald-trump-election-defense-fundraising-defrauded-fans>
 - a. create a doc for spacy nlp.
 - b. Print all the doc named entities.
 - c. Extract the most doc.ents
 - d. Visualize the doc span on displaCy.
