

NLP - Sentence and word tokenization

Take a look to the spaCy documentation and answer the following items,

1. Open Jupyter notebook and import spaCy library
2. Create "nlp" a spaCy object using the english small package
3. create a doc object with the following string "Pr. Makhoul explains a reserach project. His students are listening to him"
4. using spaCy split the previous paragraph into sentences and print them.
5. Print all individual words in each sentence.
